

Clamp for securing excess slack in aerial cables

Accessory for attaching and supporting of excess slack in fiber optic aerial cable network.

Manufactured in highly resistant plastic with UV protection.

May be directly attached to wooden or concrete posts or an existing console (UPB)

With the additional advantage of possible attachment to the steel cable tie clips on the aerial cables.

Installation Options

Directly onto the console with stainless steel tie wrap.

Directly onto the anchoring clamp

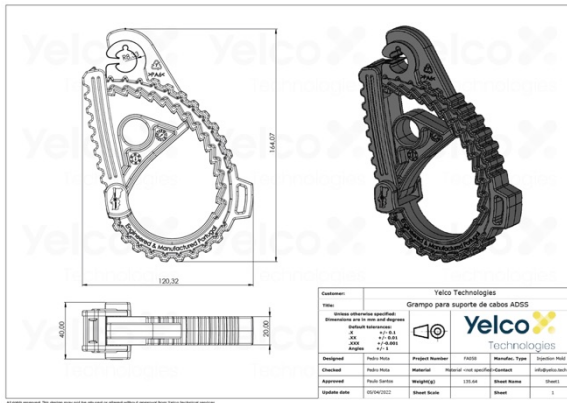

Directly onto the post, with stainless steel tie wrap

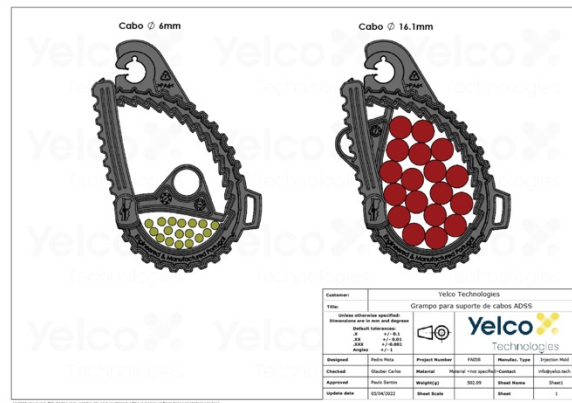

To guarantee extra stability, it is advised to secure the bottom of the rolled cable
