

## Mini Carousel for micro cable

(Twister)

Carousel is a useful device to store the excess of a cable while blowing-in cables in two directions.

A section of cable (eg 1500 m) is being blown with use of a fiberblower, then after reaching the end, we unfold the carousel, coil in the cable and continue blowing in the other direction.

This method is very efficient, reduces time and cost of transporting the equipment.

- protects the cable from damaging
- helps laying long sections of cable.
- capacity up to 2000m (cable 8 mm)
- foldable
- quick to install without tools

### Technical data

Capacity of cable	Approx. 2000m
Diameter of the carousel (basket)	Approx. 110 cm
Total length/height:	Approx.155 cm/Approx.130 cm
Weight	30kg
